Game Developer, Dot9 Games

2025 – Present · Mumbai, India

FAUG: Competitive Multiplayer FPS

- Built the FBL League, a competitive live-event system that took the game into e-sports and drove thousands of matches.
- Designed the reward architecture for skins, accessories, and unlockables, plus a battle-streak system that improved early retention.
- Built the Teams (clan) system for party-mode play, later featured in a live e-sports event.
- Optimized the game for low-end 4GB devices, raising performance from ~15 to a stable 30 FPS.
- Built a targeted announcement system with trait-based personalized messages and global broadcasts.
- Fixed backend, multiplayer, flow, and performance issues across the product.
- Integrated analytics to capture clean, useful data, and set up remote config so designers and management could tune the game without new builds.
- Ran A/B tests with PlayFab Experiments to validate features against real user segments.

Chapter 26: Casual Multiplayer Games & Social App

- Built several minigames (Baloot, penalty shootout, Carrom, Ludo, and more) as the app's core meta loop.
- Built the clan system for social and party-mode play.
- Built tournaments and leaderboards on a GCP backend and API.
- Added a live-cast feature that plays YouTube streams inside the app.
- Added Arabic localization with I2 Localization for the client's market.
- Shipped the project end-to-end with the team in a few months, from development to release.

Junior Game Developer, BoredLeaders Pvt. Ltd

2023 – 2024 · Delhi, India

- Improved performance by 40% by optimizing rendering and refactoring inefficient code.
- Built AI-driven NPC behaviors that added depth to gameplay.
- Designed and launched a new game level with the team, expanding content and narrative scope.
- Worked with designers to build polished, playable levels.

Game Developer Intern, BoredLeaders Pvt. Ltd

2023 · Delhi, India

- Prototyped gameplay mechanics and animations with the dev team.
- Led a graphics pass that noticeably improved the game's visual quality.

Indie Game Developer, Immersiveorama

2022 – 2023 · Mumbai, India

- Built and published Steady Light solo, a 2D physics platformer, on the Play Store, using Unity physics, DOTween, and a component-based architecture.
- Used Addressables for level management to reduce memory usage.
- Handled everything from code to animation (with some purchased art / VFX).

VFX Artist, Cinegence Media Pvt. Ltd

2019 – 2021

- Worked as a compositing and clean-up artist in post-production on several films and TV shows.
- Delivered VFX sequences under tight deadlines that fit cleanly into the final shots.
- Used Nuke for CG effects and simulations, working with animators to keep scenes consistent.
