

Divesh Dogra

GAME DEVELOPER

divesh476@gmail.com Mumbai, India divesh567.github.io github.com/Divesh567

SUMMARY

Unity game developer with 4+ years shipping mobile titles. Strong in C#, gameplay and live-ops systems, multiplayer, and performance optimization. Currently building a competitive multiplayer FPS and a casual multiplayer social app.

SKILLS

C#, Multiplayer / Netcode, Shader Graph, UI / UX, Profiling & optimization, Lighting / World Design, OOP, Debugging

EXPERIENCE

Game Developer, Dot9 Games

2025 to Present · Mumbai, India

FAUG: Competitive Multiplayer FPS

- Optimized the game for low-end 4GB devices, raising performance from ~15 to a stable 30 FPS.
- Built the FBL League, a competitive live-event system that took the game into e-sports and drove thousands of matches.
- Designed the reward architecture for skins, accessories, and unlockables, plus a battle-streak system that improved early retention.
- Created the Teams (clan) system for party-mode play, later featured in a live e-sports event.
- Implemented a targeted announcement system with trait-based personalized messages and global broadcasts.
- Integrated analytics to capture clean, useful data, and set up remote config so designers and management could tune the game without new builds.
- Ran A/B tests with PlayFab Experiments to validate features against real user segments.
- Fixed backend, multiplayer, flow, and performance issues across the product.

Chapter 26: Casual Multiplayer Games & Social App

- Built several minigames (Baloot, penalty shootout, Carrom, Ludo, and more) as the app's core meta loop.
- Developed tournaments and leaderboards on a GCP backend and API.
- Developed the clan system for social and party-mode play.
- Added a live-cast feature that plays YouTube streams inside the app.
- Added Arabic localization with I2 Localization for the client's market.
- Shipped the project end-to-end with the team in a few months, from development to release.

Junior Game Developer (joined as Intern), BoredLeaders Pvt. Ltd

2023 to 2024 · Delhi, India

- Improved performance by 40% by optimizing rendering and refactoring inefficient code.
- Implemented AI-driven NPC behaviors that added depth to gameplay.
- Designed and launched a new game level with the team, expanding content and narrative scope.
- Worked with designers to build polished, playable levels.
- As an intern, prototyped gameplay mechanics and animations with the dev team and led a graphics pass that noticeably improved the game's visual quality.

Indie Game Developer, Immersiveorama

2022 to 2023 · Mumbai, India

- Solo-developed and published Steady Light, a 2D physics platformer, on the Play Store, using Unity physics, DOTween, and a component-based architecture.
- Used Addressables for level management to reduce memory usage.
- Handled everything from code to animation (with some purchased art / VFX).

VFX Artist, Cinegence Media Pvt. Ltd

2019 to 2021

- Worked as a compositing and clean-up artist in post-production on several films and TV shows.
- Delivered VFX sequences under tight deadlines that fit cleanly into the final shots.
- Used Nuke for CG effects and simulations, working with animators to keep scenes consistent.
